TEACHING STATEMENT

MOSTAFA UDDIN
EMAIL: MUDDIN@CS.ODU.EDU

In my view, teaching is the most trilling experience one can have in an academic career. Often research experience can be tiresome, and takes long time to get the actual outcome of effort. Where in teaching, an academician can experience the consequence in the classroom with interacting the students. I also believe, interacting with students often energiz sole puprose

I am comfortable in teaching any undergraduate and graduate level computer science and engineering courses. However, if I am given a choice, I would choose subjects that relate to my research interest, such as the Computer Networks, Mobile Computing, Wireless Network, and Operating Systems, as these are the subjects on which I can impart advanced knowledge to my students. At both the undergraduate and graduate levels, I am interested in designing new courses that address recent advancements in Embedded Sensing Systems, Mobile Computing, Ubiquitous Computing, and Cyber-Physical Systems.
